# PowerKage™ Non-Electric Fence

Effective Facilities Protection From Animal  
Intrusion and Damage

# PowerKage™ is a practical, humane and highly effective option in preventing animal intrusion.

## > A costly, common problem

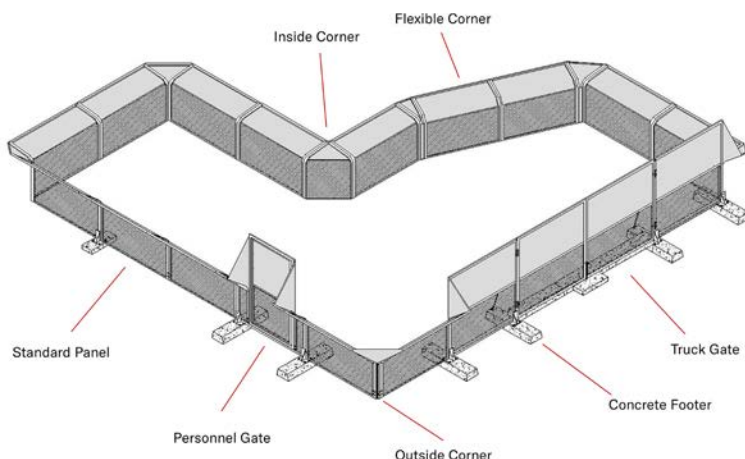

Animal interference in utilities causes costly outages and repair costs. Trapping is unreliable, and electric fences have high costs and welfare concerns. PowerKage™ offers a passive, harm-free solution for high voltage equipment protection.

## > Effective functional design

Backed by extensive research, testing, and decades of successful use at numerous North American electricity distributors, Kinectrics' patented PowerKage™ design offers reliable protection.

## > Flexible, low maintenance solution

PowerKage™ requires minimal maintenance. Its flexible fence layouts can target specific problem areas with smaller enclosures within utility premises. Given the high costs of animal-related outages, the payback period for PowerKage™ is very short.

The PowerKage™ non-electric fence significantly decreases potential issues related to safety, liability and animal welfare that can be associated with electric fence installations.

It can be grounded to meet IEEE requirements for transmission substations.

### Maintenance Free

- Minimal maintenance through decades of operation.
- Cost-effective compared with electrified counterparts.

### Robust Wind Resistance

- Designed to withstand extreme wind-loading.
- Blueprint calculations can be provided to meet client requirements.
- Real world proof is demonstrated by withstanding multiple hurricanes.

### Galvanized and Powder Coated Steel

- Galvanized powder-coated steel shield.
- Long-term resistance to climate when compared to plastic alternatives.
- Straight surface to prevent animals' traverse.

### Modular Design

- Easy to install, assemble, disassemble or reconfigure.
- Only two-three days required for a full installation at most substations.
- No station outage is required for installation.

### Unbeatable Reliability

- Designed and constructed with top-grade materials, offering decades of reliable performance.

### A Solid Investment

- Payback period achieved after preventing just one or two outages.
- Substantial reduction or elimination of repair costs due to animal intrusion over the fence's lifetime.
